

Fen knockout mutant (in RG-Pto11 background; CRT0038) was totally susceptible to the DC3000mut5 strain or DC3000dd expressing AvrPtoB₁₋₃₈₇(RG-Pto11 was resistance to both strains), indicating Fen is the major contributor to the resistance to this pathogen.

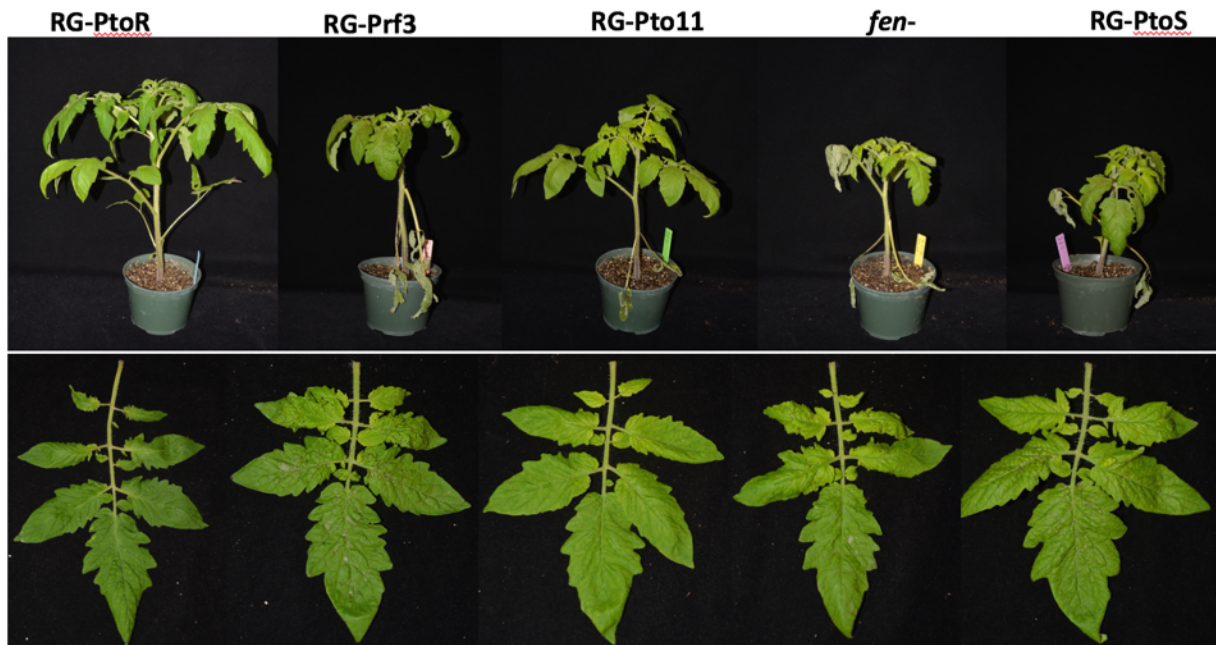

- Vacuum infiltration with DC3000 (5×10^4 cfu/ml)

- Vacuum infiltration with DC3000mut5 (5×10^4 cfu/ml)

- Vacuum infiltration with DC3000dd + AvrPtoB (5×10^4 cfu/ml)

- Vacuum infiltration with DC3000dd + AvrPtoB₁₋₃₈₇ (5×10^4 cfu/ml)
